

Full Stack Developer

Location – Netherlands (Amsterdam)

Remuneration - Generous Salary and Benefits

Overview:

Contexta360 is an Amsterdam-based AI company with double-digit growth. We are a team of highly skilled software developers and computer scientists who are passionate about artificial intelligence, speech-to-text, and natural language understanding.

Contexta360 builds speech analytics solutions to help enterprises transform service, performance, revenue and customer experience. Our AI-driven speech intelligence is designed for organisations seeking to know and serve their customers better.

We are seeking a full-stack software developer to help us improve our platform and create new solutions. If you are bright, tenacious, want to take ownership and would like to work in the exciting world of speech analytics and AI, we should talk.

What we offer:

- The opportunity to work in a team of passionate, diverse and highly driven software developers who work on cutting edge technology. We work hard, party hard and live for what we do - disrupting the world of speech analytics.
- Competitive salary and an attractive stock options package.
- 25 days holiday.
- Flexibility - we trust you to make the right decision about when and where you do your best work.
- The opportunity to make an impact in a team that values your input.
- A work environment with plenty of opportunities to challenge yourself and grow.
- Our headquarters are in the most beautiful area of the famous Amsterdam Canal District.

What we're looking for:

- 3-5 years of practical experience building frontend and backend applications in a fast-paced start-up company.
- Experience writing high quality, reusable and robust code that is easy to maintain and extend.
- MSc degree in Computer Science or a related technical field.
- Someone who is comfortable with more than one backend programming language (e.g., Java, JavaScript, Python, Go, Rust) - the ability to pick the best tool for the job is more important than experience in any single tool.
- Great communication skills.
- Willingness to explore new tools and technologies.
- Experience working with cloud platforms (e.g., AWS, Azure, GCP).
- English required, Dutch preferred.

Our pledge:

We are impartial to your ethnicity, gender, religion, disability, age or sexual orientation. We strongly encourage people from underrepresented groups to apply - if you think you have what it takes to succeed in this role, we'd love to talk to you.

Our stack:

- Java 17 (Spring Boot)
- Python
- JavaScript, TypeScript
- NodeJS, ReactJS, NextJS
- Elasticsearch, MongoDB, Redis, Kafka
- TensorFlow, MLflow
- Docker, Kubernetes
- AWS, Azure

About Contexta360:

Contexta360 was founded in 2017 and has developed proprietary intellectual property that allows us to record conversations from voice, video, and chat channels. Wherever possible, we convert verbal conversations into high-quality text, which is then processed by our AI and NLP technology to either automate manual processes and reduce costs, or to mine for insights to enable business optimisation. Our technology is used by some of the world's largest corporations as well as mid-market businesses. Our vision is to be an open, pragmatic, intuitive, and a highly cost-effective alternative to the industry's legacy players.
